

CSCI 3060U - Fall 2026

Course Project Phase #1 - Front End Requirements

Due Friday, October 2nd, 2026 (8:00pm)

In this assignment, you will analyze the requirements for the Front End and in true XP fashion represent those requirements as a set of requirements tests.

Create and organize a complete set of requirements tests for the Front End of the Digital Games Distribution System, to test for every required behaviour. Do not write any programs yet. Each test should be a complete test session input stream in a separate file. Test files should be organized into directories.

• You should hand in:

- (1) A list of all your test cases and what they are intended to test (a table of test names and intentions, in English)
 - (2) For each test case, the actual test input files and expected output files (as text file printouts)
 - (3) A test plan document, outlining how your tests are organized (in directories or whatever), how they will be run (such as shell scripts or DOS batch files), and how the output will be stored and organized for reporting and comparison with later runs (make text file printouts of any directory structures and script files created)
- Hand-ins must be completed electronically through Canvas by 8:00pm on the due date. Your electronic submission should include your list of test cases (doc, pdf), the input and output files for each test case (zip containing txt files), and your test plan document (doc, pdf). You must also have committed all files to your Github repository by the due date.
 - If Generative AI was used in your project, you must also submit the complete history of prompts and responses pertaining to the work you submitted; otherwise, you must submit a distinct file containing a written statement promising that no Generative AI was used in this project phase. Submissions with neither of these will receive a grade of zero.

Marking Scheme for Phase #1

Marking for Phase #1 will be out of ten, according to the following criteria. In each category, marks will be assigned between zero and the number of marks shown, to a resolution of 1/2 mark. The X marks for group effort may be positive or negative and are up to the discretion of the TA (based on attendance, the Github repository and group feedback forms).

List of Test Cases and What They Are to Test	
Descriptions	2 marks
- <i>table of test cases telling which case each is intended to test</i>	
Completeness	2 marks
- <i>test cases cover majority of cases allowed by requirements, and include cases to test all constraints</i>	
Actual Test Case Inputs and Expected Outputs	
Test Files	2 marks
- <i>all provided, and with correct expected output?</i>	
Test Plan	

Test Input and Output Organization		1 mark
<i>- there is a good plan to keep test cases and results well organized</i>		
Test Run Plan		1 mark
<i>- there is a workable plan for running all test cases</i>		
Other		
Requirements Problems		2 marks
<i>- problems found in the requirements are handled by test cases</i>		
Group Effort		X marks
<i>- any penalties for failure to present work to TA client in lab</i>		=====
<i>- individual adjustment based on fair group member contribution</i>		
Total		10 marks

<https://github.com/aj201/CSCI-3060U-Software-Quality>

Test Plans

Tests will be organized into a nested directory structure contained in a folder within the root of the project. The folder containing the tests will be named "test-files" and branch off into separate folders for each of the required features by name. Within the folders of the features there will be an input, output, and log folder holding the inputs and outputs of the test cases as well as a log file of the feature test. The input files will follow the naming convention "transactionID-IN.txt", "transactionID-OUT.txt", "transactionCode-date.txt". Input files will contain a label for the transaction calls for internal reference which will be ignored and the transaction input. Output files will contain the terminal outputs in quotes as well as labels for internal reference which will be ignored. Log files will contain all the test input, output, and results separated by test case with an index at the top showing which succeeded and which failed. Additionally, within the "test-files" directory will be another folder named "test-logs" which will contain logs recording an overview of the test results for a single test run. Test log files will contain the index of the succeeded and failed for each transaction section.

To run the tests, a bash script will be used to automate this process. The scripts will be designed to navigate through the directories of each transaction, identify the input file and execute to return an output which is compared to the expected output. After all test cases have run for a singular transaction section, an output log will be generated in the respected directory. Additionally, after all test cases for each transaction section have been completed, an output log will be generated as well in the "test-logs" folder containing the overall test results.

Project root

Features

Updates

2026/09/24

- New transaction list that outputs to the terminal all items currently up for sale and the relevant information

Test Cases

ID:

L=Login

LO=Logout-00

C=Create-01

D=Delete-02

S=Sell-03

B=Buy-04

LI=List

R=Refund-05

AC=Addcredit-06

Transaction	ID	Description
Login	L-01	Checks that the front end system has access to read the current user accounts file
	L-02	Checks that logging in with an invalid account is rejected (user that doesn't exist or incorrect inputs)
	L-03	Checks that the game file linked to the logged in account is accessible
	L-04	Checks session creation for non-admin account login
	L-05	Checks that only non-admin privileged transactions are accessible while admin privileged transaction should be rejected
	L-06	Checks session creation for admin account login

	L-07	Checks that all types of transactions are accessible by the admin account (has proper admin privileges)
	L-08	Checks that only one session can be active for a given account
	L-09	Checks that any non-login transaction are rejected before a login transaction has accepted
	L-10	Checks that any non-login transaction that are privileged can be accessed after a login session has been created
Logout	LO-01	Checks that a logout transaction is logged into the daily transaction file after the transaction is accepted
	LO-02	Check that the logout transaction is only accepted if the user is logged in
	LO-02	Checks that all transactions after logging out are rejected except login
Create	C-01	Checks that creating a new user with an invalid account information is rejected (name is longer than 15 characters or name is already being used)
	C-02	Checks that a new user is created with admin privileges
	C-03	Checks that only accounts with admin privileges can create other accounts with admin privileges
	C-04	Checks that a new user is created with with non-admin privileges (full-standard, buy-standard, sell-standard)
	C-05	Checks that a create transaction is logged into the daily transaction file after the transaction is accepted
	C-06	Checks if the user credits is above the maximum 999,999
Delete	D-01	Checks that the deletion transaction is only accepted when logged in as an admin
	D-02	Checks that deleting user is only accepted with valid usernames (user exists and not the name of the current user using making the transaction)
	D-03	Checks that a delete transaction is logged into the daily transaction file after the transaction is accepted

	D-04	Checks that any transaction after deletion is rejected by the deleted user
	D-05	Checks that any games the user being deleted is selling is also removed from the games list
Sell	S-01	Checks that the user can only sell games when logged into an existing account with proper privileges (admin, full-standard, selling-standard)
	S-02	Checks that creating a game listing is only accepted with valid listing information (game name, price)
	S-03	Checks that the game name has a maximum length of 25 characters
	S-04	Checks that nonunique game names are rejected
	S-05	Checks that the listed price <999.99
	S-06	Checks that after the initial sell transaction is accepted no other sell transaction is accepted until the next session
	S-07	Checks that a sell transaction is logged into the daily transaction file after the transaction is accepted
Buy	B-01	Checks that only logged in users with proper privileges can be accepted (admin, full-standard, and buy-standard)
	B-02	Checks that only valid game and seller name values pairs are accepted
	B-03	Checks that if the user already owns the game, the transaction is rejected
	B-04	Checks that user has sufficient funds for the game being purchased
	B-05	Checks that the seller of the game is credited for the amount paid
	B-06	Checks that the game bought is added to the users library
	B-07	Checks that the buy transaction is recorded to the daily transaction file after the transaction is accepted

List	LI-01	Check that only valid values for game names are accepted
		Check that only valid values (they exist) for sellers name are accepted
		Checks that only valid values for cost amount are accepted
		Checks that a list of games are returned
Refund	R-01	Checks that initiating the refund only accepted with proper admin privilege (admin, full-standard, buy-standard)
	R-02	Checks that initiating the refund only accepted with proper admin full-standard privilege
	R-03	Checks that initiating the refund only accepted with proper buy-standard privilege
	R-04	Checks that initiating the refund rejected without proper privilege (sell privilege)
	R-05	Checks that refunds is rejected if targeting an accounts with non-selling privileges (buy-standard)
	R-06	Checks that refund is rejected if the initiating account is not related to current refund transaction (not the buyer or seller)
	R-07	Checks that only non existing users for the buyers and sellers rejected
	R-08	Checks that the sellers and buyers accounts are not the same
	R-09	Checks that invalid values amount for refunded credits are rejected
	R-10	Checks that not existing being refunded are rejected
	R-11	Checks that refund is rejected if game was not sold by seller
	R-12	Checks that the game being refunded exists in the buyers library
	R-13	Checks that the transaction is rejected if the amount refunded would surpass the buyers credit limit
	R-14	Checks that if the sellers credit balance cannot cover the refund transaction is rejected
	R-15	Checks that a refund transaction is logged into the daily transaction file after the transaction is accepted

Add credit	AC-01	Checks add credit transaction by users with admin privilege are acceptance
	AC-02	Checks add credit transaction by users with full-standard privilege are acceptance
	AC-03	Checks add credit transaction by users with buy-standard privilege are acceptance
	AC-04	Checks add credit transaction by users with sell-standard privilege are rejected
	AC-05	Checks that adding credits to a user that doesn't exist is rejected with admin privileges
	AC-06	Checks that only invalid credit values are rejected
	AC-07	Checks that any amount added in one session accumulating over \$1000.00 is rejected
	AC-08	Check that transaction is rejected if amount added would surpass the credit limit

Test Inputs

Username	Jane Doe	John Doe	Jane Roe	Richard Roe
Privilege	Admin	Full-standard	Buy-standard	Sell-standard

ID	Test Case Inputs
L-01	Checks that the front end system has access to read the current user accounts file Input: Load-accounts "John Doe" "correctPassword" login Output: "User Accounts Loaded"
L-02	Checks that logging in with an invalid account is rejected (user that doesn't exist or incorrect inputs) Input: "wrongUser"

	"correctPassword" login <u>Output:</u> "Login failed user does not exist"
L-03	Checks that the game file linked to the logged in account is accessible <u>Input:</u> "John Doe" "correctPassword" login list-games <u>Output:</u> "User signed in" "Games list loaded"
L-04	Checks session creation for non-admin account login <u>Input:</u> "John Doe" "correctPassword" login <u>Output:</u> "Standard user signed in"
L-05	Checks that only non-admin privileged transactions are accessible while admin privileged transaction should be rejected <u>Input:</u> "John Doe" "correctPassword" Login Refund transaction <u>Output:</u> "Error:User not admin"
L-06	Checks session creation for admin account login <u>Input:</u> "Jane Doe"

	"correctPassword" login <u>Output:</u> "Admin user signed in"
L-07	Checks that only one session can be active for a given account <u>Input:</u> "John Doe" "correctPassword" Login "John Doe" "correctPassword" Login <u>Output:</u> "User has signed in" "Error: Session already active"
L-08	Checks that any non-login transaction are rejected before a login transaction has accepted <u>Input:</u> Refund transaction <u>Output:</u> Error: No active session""
LO-01	Checks that a logout transaction is logged into the daily transaction file after the transaction is accepted <u>Input:</u> login "validUser" "correctPassword" logout <u>Output:</u> "Logout recorded" <daily transaction file updated>

LO-02	Check that the logout transaction is only accepted if the user is logged in <u>Input:</u> logout <u>Output:</u> "Error:No active session"
LO-03	Checks that all transactions after logging out are rejected except login <u>Input:</u> List-game Buy-game login "validUser" "correctPassword" <u>Output:</u> "Error:no active session" "Error:no active session" "User logged in" <daily transaction file updated>
C-01	Checks that creating a new user with an invalid account information is rejected (name is longer than 15 characters or name is already being used) <u>Input:</u> login "Jane Doe" "correctPassword" create Username:"thisNameIsTooLong" UserType:"standard" <u>Output:</u> "Error:Username too long"
C-02	Checks that a new user is created with admin privileges <u>Input:</u> login "Jane Doe" "correctPassword" create Username:"newUser" UserType:"admin"

	Write to daily Transaction <u>Output:</u> "New Admin user created"
C-03	Checks that only accounts with admin privileges can create other accounts with admin privileges <u>Input:</u> login "John Doe" "correctPassword" create <u>Output:</u> "Error: Transaction failed incorrect privileges"
C-04	Checks that a new user is created with with non-admin privileges (full-standard, buy-standard, sell-standard) <u>Input:</u> login "Jane Doe" "correctPassword" create Username:"Jane Roe" UserType:"buy-standard" Write to daily Transaction <u>Output:</u> "New User created with buy privilege"
C-05	Checks that a create transaction is logged into the daily transaction file after the transaction is accepted <u>Input:</u> login "Jane Doe" "correctPassword" create Username:"NewUser" UserType:"buy-standard" Write to daily Transaction <u>Output:</u> "Daily Transaction updated"

C-06	Checks if the user credits is above the maximum 999,999 <u>Input:</u> login "Jane Doe" "correctPassword" create Username:"NewUser" UserType:"buy-standard" credits:9999999 Write to daily Transaction <u>Output:</u> "Error: credits above 999999, account creation failed"
D-01	Checks that the deletion transaction is only accepted when logged in as an admin <u>Input:</u> Login - transaction call username: "Not Admin" Delete game transaction - transaction call Login - transaction call username: "Admin" Delete game transaction - transaction call delete: "game-to-be-deleted" <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Delete transaction initialized Rejected: User is not an admin Delete transaction rejected "Login to account" Login accepted "Enter transaction" Delete transaction initialized "Enter the name of the game to be deleted" Game Deleted Delete transaction accepted

D-02	Checks that deleting user is only accepted with valid usernames (user exists and not the name of the current user using making the transaction) <u>Input:</u> Login - transaction call username: "Admin" Delete user transaction - transaction call delete: "Admin" Delete user transaction - transaction call delete: "user-that-does-not-exist" Delete user transaction - transaction call delete: "user-that-does-exist" <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Delete transaction initialized "Enter name of user" Rejected: Name belongs to current user Delete transaction rejected "Enter transaction" Delete transaction initialized "Enter name of user" Rejected: No user with that name Delete transaction rejected "Enter transaction" Delete transaction initialized "Enter name of user" <user> deleted Delete transaction accepted
D-03	Checks that a delete transaction is logged into the daily transaction file after the transaction is accepted <u>Input:</u> Login - transaction call username: "Admin" Delete user transaction - transaction call delete: "user-that-does-exist" Print daily transaction - transaction call

	<u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Delete transaction initialized “Enter name of user” <user> deleted Delete transaction accepted “Enter transaction” <daily transaction file>
D-04	Checks that any transaction after deletion is rejected by the deleted user <u>Input:</u> Login - transaction call username: “Admin” Delete user transaction - transaction call delete: “user-that-exists” Add credit - transaction call username: “user-that-exists” Logout - transaction call Login - transaction call username: “user-that-exists” <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Delete transaction initialized “Enter name of user” <user> deleted Delete transaction accepted “Enter transaction” Add credit transaction initialized “Enter name of user” User does not exist Add credit transaction rejected “Enter transaction” Logout transaction accepted “Login to account”

	User does not exist Login rejected
D-05	Checks that any games the user being deleted is selling is also removed from the games list <u>Input:</u> Login - transaction call username: "Admin" Delete user transaction - transaction call delete: "seller-user" Buy transaction - transaction call buy-game: "seller-user's-game" <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Delete transaction initialized "Enter name of user" <user> deleted Delete transaction accepted "Enter transaction" Buy transaction initialized "Enter name of game" Rejected: No game with that name Buy transaction rejected
S-01	Checks that the user can only sell games when logged into an existing account with proper privileges (admin, full-standard, selling-standard) <u>Inputs:</u> Login - transaction call username: "buy-standard-user" Sell transaction - transaction call <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction"

	Sell transaction initialized User is not able to sell games Sell transaction rejected
S-02	Checks that creating a game listing is only accepted with valid listing information (game name, price) <u>Inputs:</u> Login - transaction call username: "sell-standard-user" Sell transaction - transaction call Game listing information: "name", <invalid price> <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Sell transaction initialized "Enter game listing information" Price or name invalid Sell transaction rejected
S-03	Checks that the game name has a maximum length of 25 characters <u>Inputs:</u> Login - transaction call username: "sell-standard-user" Sell transaction - transaction call Game listing information: "abcdefghijklmnopqrstuvwxy", 50 Sell transaction - transaction call Game listing information: "abcdefghijklmnopqrstuvwxy", 50 <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Sell transaction initialized "Enter game listing information" Game listing created Sell transaction accepted "Enter transaction" Sell transaction initialized

	“Enter game listing information” Rejected: Name is more than 25 characters Sell transaction rejected
S-04	Checks that nonunique game names are rejected <u>Inputs:</u> Login - transaction call username: “sell-standard-user” Sell transaction - transaction call Game listing information: “game-with-same-name”, 50 <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Sell transaction initialized “Enter game listing information” Rejected: Game with that name is already listed Sell transaction rejected
S-05	Checks that the listed price <999.99 <u>Inputs:</u> Login - transaction call username: “sell-standard-user” Sell transaction - transaction call Game listing information: “regular-game”, 50 Sell transaction - transaction call Game listing information: “overpriced-game”, 1000 <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Sell transaction initialized “Enter game listing information” Game listing created Sell transaction accepted “Enter transaction” Sell transaction initialized “Enter game listing information” Rejected: Listed price is above 999.99 Sell transaction rejected

S-06	Checks that after the initial sell transaction is accepted no other transaction for that game is accepted until the next session <u>Inputs:</u> Login - transaction call username: "full-standard-user" Sell transaction - transaction call Game listing information: "full-standard-user's-game", 50 Buy transaction - transaction call buy-game: "full-standard-user's-game" Logout - transaction call Login - transaction call username: "full-standard-user" Buy transaction - transaction call buy-game: "full-standard-user's-game" <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Sell transaction initialized "Enter game listing information" Game listing created Sell transaction accepted "Enter transaction" Buy transaction initialized "Enter game name" Rejected: Game not available until next login session Buy transaction rejected "Enter transaction" Logout transaction accepted "Login to account" Login accepted "Enter transaction" Buy transaction initialized "Enter game name" "Game bought!" Buy transaction accepted
------	---

S-07	Checks that a sell transaction is logged into the daily transaction file after the transaction is accepted <u>Input:</u> Login - transaction call username: "Admin" Sell transaction - transaction call Game listing information: "game", 50 Print daily transaction - transaction call <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Sell transaction initialized "Enter game listing information" Game listing created Sell transaction accepted "Enter transaction" <daily transaction file>
B-01	Checks that only logged in users with proper privileges can be accepted (admin, full-standard, and buy-standard) <u>Inputs:</u> Login - transaction call username: "sell-standard-user" Buy transaction - transaction call buyer: "sell-standard-user" <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Buy transaction initialized Error: User is not allowed to buy games Buy transaction rejected
B-02	Checks that only valid game and seller name values pairs are accepted <u>Inputs:</u> Login - transaction call

	username: "Richard Roe" seller: "Wrong seller" buy-game: "Right game" Seller: "Right seller" buy-game: "Wrong game" seller: "Right seller" buy-game: "Right game" <u>Expected Transaction File output</u> 04_Right game_Right seller_Richard Roe_John Doe_29.99 <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Buy transaction initialized "Enter the seller's username" "Enter the game's name" Buy transaction rejected "Enter the seller's username" "Enter the game's name" Buy transaction rejected "Enter the seller's username" "Enter the game's name" Buy transaction accepted
B-03	Checks that if the user already owns the game, the transaction is rejected <u>Inputs:</u> Login - transaction call username: "Richard Roe" Buy transaction - transaction call buy-game: "Already owned game" Buy transaction - transaction call buy-game: "Not owned game" <u>Expected Transaction File output</u> <u>Expected Outputs:</u> "Login to account" Login accepted "Enter transaction" Buy transaction initialized "Select game to buy"

	User already owns the game Buy transaction rejected “Enter transaction” Buy transaction initialized “Select game to buy” Game selected Game bought! Buy transaction accepted
B-03	Checks that if the user already owns the game, the transaction is rejected <u>Inputs:</u> Login - transaction call username: “Richard Roe” Buy transaction - transaction call buy-game: “Already owned game” Buy transaction - transaction call buy-game: “Not owned game” <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Buy transaction initialized “Select game to buy” User already owns the game Buy transaction rejected “Enter transaction” Buy transaction initialized “Select game to buy” Game selected Game bought! Buy transaction accepted
B-04	Checks that user has sufficient funds for the game being purchased <u>Inputs:</u> Login - transaction call username: “Richard Roe” Buy transaction - transaction call buy-game: “Really expensive game” Buy transaction - transaction call buy-game: “Very cheap game”

	<u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Buy transaction initialized “Select game to buy” Rejected: user doesn’t have enough funds for game Buy transaction rejected “Enter transaction” Buy transaction initialized “Select game to buy” Game bought! Buy transaction accepted
B-05	Checks that the seller of the game is credited for the amount payed <u>Input:</u> Login - transaction call username: “Richard Roe” Buy transaction - transaction call buy-game: “seller game” <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Buy transaction initialized “Select game to buy” Game bought! Buy transaction accepted Seller’s credit is now <Seller’s credit>
B-06	Checks that the game bought is added to the users library <u>Input:</u> Login - transaction call username: “Richard Roe” Buy transaction - transaction call buy-game: “game” <u>Expected Outputs:</u> “Login to account” Login accepted

	“Enter transaction” Buy transaction initialized “Select game to buy” Game bought! Buy transaction accepted <buy-game> is now in your account!
B-07	Checks that the buy transaction is recorded to the daily transaction file after the transaction is accepted <u>Input:</u> Login - transaction call username: “Richard Roe” Buy transaction - transaction call buy-game: “game” Print daily transaction - transaction call <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” Buy transaction initialized “Select game to buy” Game bought! Buy transaction accepted “Enter transaction” <daily transaction file>
LI-01	Checks that the list-games-for-sale transaction works <u>Input:</u> Login - transaction call username: “Admin” list-games-for-sale - transaction call <u>Expected Outputs:</u> “Login to account” Login accepted “Enter transaction” List-games-for-sale transaction initialized

	<games for sale> List-games-for-sale accepted
